Handwritten formula test (simulated):

$\int_0^1 x^2 \, dx = 1/3$ (integral)

$E = mc^2$ (Einstein)

$a^2 + b^2 = c^2$ (Pythagoras)

f(x) = Σ (-1)^n x^(2n+1)/(2n+1)! (Taylor)

$(a+b)^3 = a^3 + 3a^2b + 3ab^2 + b^3$ (binomial)

Complex: $\alpha = \beta / \gamma \rightarrow \delta \approx 12.34\%$
