

Printed math test:

$$\int_{-\infty}^{\infty} e^{-x^2} dx = \sqrt{\pi}$$

$$\sum_{k=1}^n k = n(n+1)/2$$

$$d/dx e^x = e^x$$

$$y = 1/\sqrt{2\pi\sigma^2} \cdot \exp(-(x-\mu)^2/(2\sigma^2)) \quad (\text{Gaussian})$$

$$\text{Matrix: } \begin{bmatrix} 1 & 2 \\ 3 & 4 \end{bmatrix} \det = -2$$
